Fascia The Tensional Network Of The Human Body The Science And Clinical Applications In Manual And Movement Therapy By Robert Schleip Phd Ma Thomas W Findley Md Phd Peter Huijing Phd

"Pressestimmen 'A very in-depth resource ideal for professionals with an interest in fascia & human movement, the book offers comprehensive coverage ranging from clinical conditions & associated therapies, to recent developed research techniques.' **International Therapy, January 2013 (Issue 103)** 'This book provides a comprehensive collation of information regarding fascia by authors and contributors from diverse clinical and professional backgrounds. The text covers the structure and function of fascia, the related disorders, an in-depth overview of therapies through to their applications. The most up-to-date research techniques are discussed along with directions for future research...In short, this is a book that will become a classic text and should find its way onto the bookshelf of anyone with a therapeutic interest in the human body.' **Posture and Mobility, January 2013** 'The editors have successfully integrated current scientific knowledge of fascial anatomy and physiology with clinical applications...Helpful videos are available via the book's website to complement some of the chapters...The website also provides opportunity to report typographical errors, and as a first edition of a very wide subject, these are probably unavoidable...The book should be of interest to various health practitioners, including physiotherapists, osteopaths, and chiropractors, to improve understanding of different clinical concepts while not aiming to provide detailed information regarding specific manipulative techniques.' **Physical Therapy Review, October 2013** Rezension Compiled by experts of international renown, Fascia: The Tensional Network of the Human Body brings together very different contributors who share the desire to bridge the gap between theory and practice as much as possible in our current knowledge of the human fascia. With contributions from over 100 specialists and researchers from throughout the world, this new volume will be ideal for all professionals who have an interest in fascia and human movement - physiotherapists, osteopathic physicians and osteopaths, chiropractors, structural integration practitioners, manual therapists, massage therapists, acupuncturists, yoga or Pilates instructors, exercise scientists and personal trainers - as well as physicians involved with musculoskeletal medicine, pain management and rehabilitation, and basic scientists working in the field.
